Computer scientist (PhD) working at the intersection of *lossless data compression*, *compressed data structures*, and *green, energy-aware algorithm engineering*. My current research designs scalable, energy-aware compression, indexing, and semantic-search techniques for large source-code archives (Software Heritage), grounded in a commitment to open science and open-data infrastructures.

EDUCATION

PhD in Computer Science (EQF 8)

University of Pisa

Nov 2020 – Jan 2024 Pisa, Italy

I was a member of the Acube Laboratory (acube.di.unipi.it), directed by Prof. Paolo Ferragina.
My doctoral research focused on *computation-friendly* lossless compression techniques, adapting general-purpose lossless compression algorithms (grammar-based, zip-like, entropy-based) to application contexts such as machine-learning inference and string indexing. The proposed compressed representations enable the direct execution of linear algebra operations within time proportional to their compressed size. My research interests included compressed data structures, sparse matrix-vector multiplication (SpMV), key-value stores, compacted tries, stringology, and graph algorithms. I was advised by Prof. P. Ferragina and Prof. G. Manzini, authors of the FM-index and recipients of the 2022 ACM Paris Kanellakis Theory and Practice Award.

Thesis title: *Computation-Friendly Compression of Matrices and Tries*.
Advisors: P. Ferragina, G. Manzini. Defence date: 6 May 2024.
Grade: Excellent.

MSc in Computer Science and Networking (EQF 7)

University of Pisa *and* Sant'Anna School of Advanced Studies

Nov 2017 – Mar 2020 Pisa, Italy

The MSc programme in Computer Science and Networking (conducted in English) was a joint initiative of the TeCIP Institute (Sant'Anna School of Advanced Studies) and the University of Pisa (Departments of Computer Science and Information Engineering), attracting international students. Relevant coursework:

- Algorithm Design, Analysis, and Implementation
- Big Data Analytics, Search Engines, and Information Retrieval
- High-Performance Computing (HPC) and Parallel Computing (focus on multi-threading)
- Networking (protocols, components, configuration, and management), JUNOS network OS, optical fibre technologies

Achieved 30/30 *cum laude* in five courses.
Served as a *student representative* for the Master's programme (2018–2020).

Thesis title: *Algorithms and Data Structures for Efficient Ride-Sharing Platforms*.
Advisors: P. Ferragina, A. Marino. Defence date: 6 Mar 2020.
Grade: 110/110 *cum laude*.

BSc in Computer and Electronic Engineering (EQF 6)

University of Perugia

Sep 2014 – Oct 2017 Perugia, Italy

The BSc in Computer and Electronic Engineering provides a robust foundation in mathematics and physics, equipping students with the engineering skills to solve complex problems and integrate diverse knowledge for roles in electronics or ICT.
Relevant coursework:

- Fundamentals of Telecommunications, Signal Processing, and Automation
- Algorithms, Databases, and Computer Programming (focus on `Java` and `C`)

- Fundamentals of Antennas and Electronic Circuits

Achieved 30/30 *cum laude* in seven courses.

Thesis title (translated): *Implementation of a Distributed Graph Clustering Algorithm on the Giraph Platform Following the TLAV Paradigm*.
Advisor: E. Di Giacomo. Defence date: 27 Oct 2017.
Grade: 110/110 *cum laude*.

AWARDS

Sant'Anna School — Best Graduate Award (Master's in Computer Science & Networking)
Ranked 2nd in the cohort (2017-2018) | High GPA | Fastest completion.

Award details

---

con.Scienze — National Best Master's Thesis Award 2020
Selected among all Italian technical universities | August 2019 - July 2020 cohort.

Award announcement

PUBLICATIONS

Link legend: DOI • arXiv • author PDF • Wikidata • code • data • SWHID • fix • licence. *Venue rankings:* ICORE 2026 (conferences; workshops are not ranked) and SCImago SJR 2025 (journals; best-category quartile), each linked to its source. *Author order:* alphabetical, as customary in theoretical computer science, in j2, j3, c1, c2, c4, w2.

CODE ARTEFACTS

Note: For each code artefact, I report the associated publication/manuscript (c1, c2, c3, c4, c5, j2, j3, j4, w1, w3, w4) in which the code served for experimental evaluations. Where available, links to the corresponding Wikidata item and Software Heritage snapshot (SWHID) are also given.

---

w3 **MediaWiki Code2Code Search** A semantic search engine for the MediaWiki ecosystem that allows users to find code based on "under-the-surface" similarity rather than exact keywords. It leverages a Jina AI bi-encoder model to generate vector embeddings for over 1.1 million code snippets, enabling cross-language retrieval (C++, PHP, Python, etc.) based on functional behaviour. The tool integrates with Software Heritage to provide intrinsic permalinks (SWHIDs) for long-term traceability and features a polyglot interface supporting Italian, Telugu, and French. Developed as part of a research project at the Sant'Anna School of Advanced Studies and funded by the Alfred P. Sloan Foundation. (Project site, GitHub site)
WD (code) • SWHID • Zenodo • Hugging Face

c5 **g-mm-repair** A memory-bounded GPU engine for streaming right-multiplication over grammar-compressed matrices, targeting genotype and graph data. Extends the RePair-compressed matrix-multiplication line of work (mm-repair) to memory-constrained accelerators. (GitHub site)
data • SWHID

c4 **swh-wd-reconciliation** Tooling to bridge Software Heritage code archival with the Semantic Web, reconciling archived software with Wikidata items via COAR Notify. (GitHub site)

c3 **code2code_benchmark** A comprehensive benchmark for evaluating candidate recall in large-scale code-to-code retrieval. (GitHub site)

w1 **seam-carving** An analysis and implementation of the seam-carving algorithm for content-aware image resizing. (GitHub site)
WD (code)

c2, w4 **green-compressed-storage** Efficiently reads large source-code datasets in Parquet format using a Permute-Partition-Compress approach on top of RocksDB. Achieved GiB/s throughput and compelling compression for source code archival. (GitHub site)
WD (code)

j4 **green-lossless-spmv**
Green Lossless Sparse Matrix-Vector Multiplication (SpMV) implementation. It focuses on lossless compression techniques that optimise space, time, and energy for multiplications between binary or ternary matrix formats and real-valued vectors. (GitHub site)
WD (code)

j4 **zuckerli**
Readapted Google's Zuckerli compressed matrix format to carry out computation-friendly matrix-vector multiplication kernels and PageRank computations. (GitHub fork)

c1, j3 **CoCo-trie**
A data-aware trie-shaped data structure for indexing and compressing string sets, developed by A^3 lab. Implements principled subtree collapsing with optimal encoding scheme selection to minimise space. (GitHub site)
WD (code) • SWHID

j2 **mm-repair**
Matrix multiplication implementation for RePair-compressed matrices. Efficient computation methods for matrices compressed using grammar-based compression techniques. (GitHub site)
WD (code) • SWHID

Wikimedia tooling

- **MediaWiki Accessibility Checker** Proof-of-concept Toolforge tool auditing MediaWiki pages against WCAG 2.0 AA, developed at the Wikimedia Hackathon 2026 (Milan).
- **Translation-tag tool** Contributor to a web application by the Indic Wikimedia Technical Committee that inserts translation tags by parsing wikicode.
- **Template and media scripts** Orthography auto-detection for a Lombard Wikipedia template and a REST-based image-resizing script, developed at the Wikimedia Hackathon 2025 (Palermo).

Earlier & student projects

- **Watermark** Multi-threaded C++ image-watermarking application (POSIX threads with fork–join, plus a FastFlow version) with performance-evaluation tooling.
- **PCAP Lab** C/C++ exercises on the libpcap library for network-traffic capture: packet-metadata printing, a stateful RPC for packet counting, and IP/TCP packet inspection.
- **BeepBeep** Microservice application for Strava-based challenges: seven Flask services orchestrated via Docker Compose (data, challenges, statistics, training objectives, API gateway, emailer, data pump).

- **We Against Virus – PharmaQ** Flask web portal estimating pharmacy queue lengths from user-submitted photos; developed at the #WeAgainstVirus hackathon (2020).

RESEARCH POSITIONS & SCHOLARSHIPS

Note: For each position, I report the associated publications (c1,c2,j1,j2,j3,j4) produced as outcomes.

Research Contractor

Health Science Interdisciplinary Research Centre

Sep 2025 – Aug 2027 | Sant'Anna School, Italy

Research conducted at the Sant'Anna School of Advanced Studies, on solutions for code archival, language-to-code, code-to-code, and semantic search (website). (c2)

Postdoctoral researcher

Project in collaboration with Software Heritage

Jul 2024 – Jun 2025 | Univ. of Pisa, Italy

Research conducted at the University of Pisa, on energy-aware compression schemes and parallel and I/O-efficient compression and indexing techniques for large source-code archives (website). I collaborated with the team at Software Heritage, including Martin Kirchgessner, David Douard, Benoît Chauvet, and Roberto di Cosmo. (j4)

PhD Scholarship

PhD in Computer Science, 36° cycle

Nov 2020 – Oct 2023 | Univ. of Pisa

Recipient of a three-year PhD research grant from the University of Pisa (Department of Computer Science). (c1, j1, j2, j3)

Research Scholarship

Citypost S.p.A.

Jun – Oct 2020 | Univ. of Pisa

Title: *Algorithms and Data Structures for Urban Mobility Platforms*. Duration: five months. Grant: Citypost S.p.A. Researched graph-based algorithmic solutions for vehicle routing and mobility problems, as part of Acube Lab's 2018–2020 research collaboration.

Offer declined: fixed-term junior researcher position (RTDA, art. 24(3)(a) L. 240/2010) in Computer Science (INFO-01/A), Free University of Bozen-Bolzano, 2025, with Prof. Johann Gamper; project on scalable database solutions for temporal data and time-series processing. (website)

FUNDED PROJECTS SUPPORTING MY RESEARCH

Note: [Inter]national projects under which my positions or research were funded, as a team member (not as PI). For each project, I report the associated publications (c1,j1,j2,j3,j4) produced as outcomes.

Alfred P. Sloan Foundation

Technology: Open Source in Science — Grant G-2025-25193

2025–ongoing | Grant `G-2025-25193`

Funding for the project to design and implement in Software Heritage new algorithmic solutions for compression and code-based searches.
Grant #G-2025-25193 (sloan.org) (c2)

NextGenerationEU—National Recovery and Resilience Plan (PNRR)

SoBigData.it-Strengthening the Italian RI for Social Mining and Big Data Analytics — Avviso (3264 del 28/12/2021)

2022–ongoing | Grant `IR0000013`

Funding for the project "SoBigData.it-Strengthening the Italian RI for Social Mining and Big Data Analytics."

NextGenerationEU – PNRR / MUR PRIN Project

Multicriteria Data Structures and Algorithms: From Compressed to Learned Indexes, and Beyond

2019–2023 | Grant n. `2017WR7SHH`

Funding from the Italian Ministry of University and Research (MUR) under the "Progetti di Rilevante Interesse Nazionale" (PRIN) programme for the project "Multicriteria Data Structures and Algorithms." Extended research includes compressed/learne indexes and beyond. Project website: learned.di.unipi.it. (j2, j3)

MIT-UniPI Grant

Using Graph Compression for Shortest Path Computation in Urban On-Demand Mobility

2019–2021

Grant on "Using Graph Compression for Shortest Path Computation in Urban On-Demand Mobility" (website). (j1)

Travel & open-access grants

- **2026** Wikimedia CH, open-access publication grant (1,000 CHF): article-processing charges for "MediaWiki Code2Code Search" (w3). (grant page)
- **2026** Wikimedia Italia, travel microgrant (€1,704, joint with C. C. Pellizzari di San Girolamo): presenting (c4) at the Wikidata Workshop @ ISWC 2026, Bari. (grant page)

INTERNATIONAL RESEARCH VISITS

Short research visit (4 days)

GRICAD

25 Nov – 28 Nov 2025 | Grenoble, France

Collaboration on the integration of RocksDB-PPC into the Software Heritage object store, with the goal of scaling to handle 30 billion files. Focus on dataset construction, partitioning strategies, and alternatives to filename-based heuristics, using the Kraken cluster for benchmarking. (signed letter)

Visiting Researcher

Software Heritage, Inria

1 Jul – 31 Jul 2025 | Paris, France

Collaboration with the Software Heritage team on efficient code compression for storage and retrieval (shard format, Terabyte-sized caching system), specifically linked to the CodeCommons project supervised by Prof. Roberto Di Cosmo and Prof. Stefano Zacchiroli. This visit aims to strengthen the existing collaboration and apply research directly to Software Heritage's vast source code archive. (signed letter)

Visiting PhD student

University of Chile

Sem. I, A.Y. 22/23 — Santiago de Chile

Three-month stay at the laboratory directed by Prof. Gonzalo Navarro. I worked on applications of the k^2-tree data structure for the storage and operation of large and sparse graphs. (signed letter)

INDUSTRY EXPERIENCE

- **Sep 2018** Invited participant, **Bending Spoons** (Copenhagen, Denmark) — selected among 20 top Italian tech students from 400+ applicants for a coding-challenge event.
- **Aug 2014** Intern, **EPLASS GmbH** (Würzburg, Germany) — C# development at an internet-based software company. (certificate)
- **Aug 2014** Intern, **Flyeralarm GmbH** (Würzburg, Germany) — cross-departmental operations at a pan-European online printing firm. (certificate)

TALKS & PRESENTATIONS

2026

- **31 Aug** *"Unpacking Software Heritage Open Science"* — DCW Conversation Hour #44, Deoband Community Wikimedia, online. [virtual] (slides • Commons • Zenodo)
- **23 Jul** *"India's Software Stories: preserving code as heritage with Software Heritage, Wikimedia Commons and Wikidata"* — Wikimania 2026, Paris, France. Joint with P. Santhosh Surampudi. (slides • Commons • video • Zenodo)
- **2 May** *"MediaWiki Code2Code Search: Semantic Search to Find Code by Under-the-Surface Similarity"* — Wikimedia Hackathon 2026 (unconference), Milan, Italy. (website • slides • Commons • Zenodo • Phabricator)
- **26 Mar** *"The Software Heritage Open Science Ecosystem: Preserving software as executable knowledge"* — CTS Seminar Series, Univ. of Pisa & IMT Lucca. [invited] (website • slides)
- **17 Mar** *"The Energy–Throughput Trade-off in Lossless-Compressed Source Code Storage"* — GREENVOLVE Workshop @ SANER 2026, Limassol, Cyprus. Joint with P. Ferragina. (website • slides)
- **21 Jan** *"Lossless-Compressed Key-Value Store for the Software Heritage Archive"* — A³Lab Inaugural Workshop (Session I), Scuola Superiore Sant'Anna, Pisa. (website • poster • slides)

2025

- **21 Nov** *"The Energy–Throughput Trade-off in Lossless-Compressed Source Code Storage"* — DBS Group seminar (Prof. J. Gamper), NOI Techpark, Free Univ. of Bozen-Bolzano. [invited] (slides)
- **22 Sep** *"Object Storage Compression"* — CodeCommons Plenary Event (Infrastructure & Unified Data Model track). [invited] (website • slides)
- **2 Jul** *"Lossless-compressed data storage for SWH: Compressed, tunable & energy-aware"* — Software Heritage team seminar, Inria Paris Centre, Paris. [invited] (slides)
- **4 Jun** *"Toward Greener Matrix Operations by Lossless Compressed Formats"* — Workshop "Learning from large, complex and structured data", Sant'Anna School, Pisa. [invited] (website • slides)
- **27 Feb** *"Verso operazioni più green su matrici tramite formati compressi senza perdita"* — Google Developer Group (GDG) Pisa, Polo Fibonacci, Univ. of Pisa. [invited] (website • slides)
- **30 Jan** *"Measuring impact by extracting knowledge of software assets"* (poster) — 2025 Software Heritage Community Workshop, Inria, Paris. (Zenodo • website)
- **28 Jan** *"Enhancing SWH Object Storage with Compressed and Dynamic Solutions"* — CodeCommons Kickoff, Inria, Paris. [invited] (website • slides)

2024

- **7 Nov** *"Toward Greener Matrix Operations by Lossless Compressed Formats"* — REGINDEX group seminar (Prof. N. Prezza), Ca' Foscari Univ., Venice. [invited] (slides)
- **21 Oct** *"Toward Greener Matrix Operations by Lossless Compressed Formats"* — Efficient Machine Learning Reading Group (TU Graz, Prof. O. Saukh). [invited] [virtual] (website • video • slides)

2022

- **16 Sep** *"Improving Matrix-Vector Multiplication via Lossless Grammar-Compressed Matrices"* (j2) — Complexity Science Hub (CSH) Webtalk, Vienna. [invited] [virtual] (website • slides)
- **5–9 Sep** *"Improving Matrix-vector Multiplication via Lossless Grammar-Compressed Matrices"* (j2) — VLDB '22, Sydney, Australia. [virtual] (website • slides)
- **17–23 Jul** *PhD research summary presentation* — Lipari School of Computational Complexity and Social Systems, Lipari, Italy. (certificate)

2021

- **19 Feb** *"Locality Filtering for Efficient Ride-Sharing Platforms"* (j1) — Mauriana Pesaresi Seminar Series 2020/2021, Univ. of Pisa. (website • slides)

PEER REVIEWING

- **2026** Program Committee member, **WISE 2026** [ICORE 2026: B] (27th Int. Conf. on Web Information Systems Engineering), research track, Venice, Italy — 2 papers reviewed. (program committee)
- **2025** Reviewer, **The Journal of Supercomputing** [SJR 2025: Q2, 0.729], Springer Nature — 1 manuscript. (certificate)

PARTICIPATION TO CONFERENCES

The 33rd IEEE International Conference on Software Analysis, Evolution and Reengineering (SANER 2026)

IEEE Computer Society

17–20 Mar 2026 — Limassol, Cyprus

In-person attendance to SANER 2026, the premier event on the theory and practice of recovering information from existing software and systems (website)

Software Heritage 2026 Symposium and Summit

UNESCO headquarters

28 Jan 2026 — Paris, France

Attended the 10th-anniversary symposium co-hosted by UNESCO and Software Heritage, focusing on the preservation of source code as a Digital Public Good. Participated in high-level discussions regarding the renewal of the UNESCO–Inria partnership, the role of Free and Open-Source Software (FOSS) in sustainable innovation, and the importance of transparent AI grounded in open, verifiable code archives. Explored the integration of software preservation within the UNESCO Recommendation on Open Science and the Global Digital Compact to support inclusive and interoperable digital ecosystems. (UNESCO website • Diff blog post)

Software Heritage 2025 Symposium and Summit

UNESCO headquarters

29 Jan 2025 — Paris, France

Engaged with leaders from UNESCO, Inria, and Software Heritage, participating in discussions and panels on critical topics including cybersecurity and regulation (e.g., EU's Cyber Resilience Act), open and transparent AI (with insights from EU AI Office, IBM Research, Open Source Initiative), open science (aligned with UNESCO Recommendation on Open Science), and cultural preservation of software as digital heritage. (UNESCO website • SWH website)

Conference article: "Compressed String Dictionaries via Data-Aware Subtrie Compaction"

SPIRE '22: 29th International Symposium on String Processing and Information Retrieval

8–10 nov 2022 — Concepción, Chile

In presence attendance to SPIRE '22, where my research group contributed the conference article (c1) (website)

TECHNICAL EXPERTISE

Research focus

Compression & compressed data structures

Core Tech Stack

lossless compression • compressed data structures • computation-friendly compression • string indexing • stringology

Compressed linear algebra on GPUs & accelerators

compressed linear algebra • memory-bounded GPU algorithms • grammar-compressed matrices • SpMV & PageRank kernels • genotype & graph data

Code archives & semantic search

source-code archives • semantic code search • code-to-code retrieval • digital preservation • open-data infrastructures

Cross-cutting

green, energy-aware algorithm engineering

C/C++	(Expert; C++11/14/17, CMake, pthreads, parallel patterns)
CUDA	(GPU kernels, memory-bounded)
Python	(NumPy, pybind11)
Bash	(Scripting/Automation)
Java	(Prior experience)
JavaScript	

Tools

- CLion (CMake, Debugging)
- VS + Copilot + git
- RocksDB, Boost
- Docker/Compose (Good)

TEACHING

Tutor

"Laboratorio II"

Sem. I, A.Y. 23/24 — University of Pisa

Tutoring (conducted in Italian) for the undergraduate course of "Laboratorio II" (24 hours).

Tutor

"Laboratorio I-A"

Sem. I, A.Y. 21/22 — University of Pisa

Tutoring (conducted in Italian) for the undergraduate course of "Laboratorio I-A" (20 hours).

NATURAL LANGUAGES

I get by with several languages, with varying levels of active engagement and passive comprehension. These include the following.

English
CEFR C1. Professional proficiency in all communication skills.

Deutsch [German]
CEFR B1. Certified language proficiency from the Centre for Applied Linguistics (CLA), UNIPG, Perugia, Italy (July 2017).

Castellano [Spanish]
CEFR B1-B2. Strong listening and reading comprehension; experience attending scientific seminars in Spanish; AI-assisted writing.

हिन्दी [Hindi]
CEFR A2. Basic grammar and vocabulary knowledge. Gboard-assisted writing; no handwriting.

Italiano [Italian]
Native speaker fluency.

OPEN DATA CONTRIBUTIONS & COMMUNITY ENGAGEMENT

Maintainer of open-source tools on Wikimedia Toolforge, including Code2Code Search (w3) and the Nablabot cross-wiki consistency bot. Member of the Indic MediaWiki Developers User Group (Wikidata reconciliation; student mentoring at the Indic Wikimedia Hackathon 2026). Co-manager of the Wikidata community on Zenodo, curating inclusion requests for Wikidata-related research outputs. Initiated 150+ Wikipedia articles; organised Wikimedia Italia meetups (Pisa, 2025; Bolzano, 2024); author on Diff; jury member, Wikipedia Asian Month 2025.

All of the above statements are true in accordance with the regulations on substitute declarations as per Article 46 et seq. of the Italian Presidential Decree 445/2000.

Pisa (Italy), the 2nd of October 2026
